Journal of Hydrology

Contents

Research Papers

Variability in Green–Ampt effective hydraulic conductivity under fallow conditions
L.M. Risse, M.A. Nearing and X.C. Zhang 1

Optimal parameter estimation for Muskingum routing with ungauged lateral inflow
M.M. Kshirsagar, B. Rajagopalan and U. Lall 25

Reducing elevation roundoff errors in digital elevation models
E.J. Nelson and N.L. Jones 37

Nitrate transport and transformation processes in unsaturated porous media
J.A. Tindall, R.L. Petrusak and P.B. McMahon 51

Predictions of drought length extreme order statistics using run theory
L.A. Moyé and A.S. Kapadia 95

A recent transformation from poor to rich fen caused by artificial groundwater recharge
D. Boeye, D. van Straaten and R.F. Verheyen 111

Dry deposition and canopy leaching rates in deciduous and coniferous forests of the Georgia Piedmont: an assessment of a regression model
R. Cappellato and N.E. Peters 131

Forecasting scale-dependent dispersion from spills in heterogeneous aquifers
S.E. Serrano 151

Water budget and flow patterns in an urban wetland
C.R. Owen 171

Mapping long-term regional runoff in the eastern United States using automated approaches
G.D. Bishop and M.R. Church 189

Analytical modelling of pesticide transport from the soil surface to a drinking water well
W.H.J. Beltman, J.J.T.I. Boesten and S.E.A.T.M. van der Zee 209

An exempler-based learning model for hydrosystems prediction and categorization
F.-J. Chang and L. Chen 229

Electrical flow through an aquifer for contaminant source leak detection and delineation of plume evolution
J.L. Osiensky and P.R. Donaldson 243

Modelling overland flow with seepage
J.A. Motha and J.M. Wigham 265

Short Communication

Measuring water use efficiency of Eucalypt trees with chambers and micrometeorological techniques — comment
A. Lindroth and E. Cienciala 281

Book Review

Stream Hydrology: An Introduction for Ecologists, by N.D. Gordon, T.A. McMahon and B.L. Finlayson — E. Whol 285
